Editorial policies

NOMAD applies several editorial policies that all editors, reviewers, and authors are expected to adhere to. NOMAD's editorial team refers to the Committee on Publication Ethics (COPE) guidelines and recommendations throughout the publication process. In instances where the below policies are breached, COPE guidelines will be followed.

Accessibility

As a publicly funded institution, NOMAD is required to meet the EU's Web Accessibility Directive (EUR-Lex, 2016), but we also recognise that this initiative is in line with our own mission: spreading science-based knowledge about the teaching and learning of mathematics in the Nordic countries and internationally.

Therefore, we ensure that all articles are published in an accessible format for readers with visual impairments or other disabilities that affect reading or understanding.

Allegations of misconduct

NOMAD, in close collaboration with the editors, commits to taking all appropriate measures to address alleged or proven research misconduct, including amending the publication in question, publishing an erratum, or retracting the work in the most extreme case.

In cases of complaints against the publisher, its staff, or editorial board, independent and external assistance will be sought, in accordance with COPE's recommendations.

Authorship and contributorship

All persons who have made a significant contribution to the work should be named in the publication as co-authors. We interpret adhere to the Vancouver Guidelines in the interpretation of significant contribution. AI-based tools and technologies for article content generation, for example, large language models (LLMs), generative AI, and chatbots (e.g., ChatGPT), may not be attributed with authorship.

All authors are accountable for the integrity and validity of the submission's content. It is the responsibility of the corresponding author to ensure that all co-authors have reviewed the final version of the submission and agree to its publication.

Others who have contributed in lesser ways to the research may be named in an Acknowledgements section.

Conflicts of interest

Any financial, legal, professional, or otherwise potential relationship between the author (or their employer, family, sponsor, etc.) with an organisation or individual that could influence – or be perceived as influencing – the research or interpretation of results should be disclosed to the editorial team upon submission. Any relevant funding

information should be provided in a separate document or cover letter upon submission.

In cases of potential conflict of interests, the scientific quality of NOMAD's academic publications is secured with the assistance of the editorial committee, consisting of external scholars who are experts in their fields.

NOMAD is published under the Creative Commons Attribution-NonCommercial-ShareAlike 4.0 International License (CC BY-NC-SA 4.0), which permits non-commercial sharing and adaptation with appropriate attribution, provided that adaptations are distributed under the same license. The respective authors retain copyright.

Funding model

NOMAD hosted by Nationellt centrum för matematikutbildning (NCM)
which is a unit within the University of Gothenburg. Our academic publishing is publicly funded. NOMAD operates on a non-profit basis. Our publications are distributed with digital Open Access, strictly without publishing fees. We do not offer royalties or other forms of financial compensation to participating editors and authors.

External contributors and research funders have no involvement in NOMAD's editorial decisions.

Peer review

NOMAD follows a double-blind peer review process for all journal research articles. A double-blind process means all submitted manuscripts are made anonymous and judged by at least two independent and external anonymous scholars appropriate for the subject.
Reviewers are asked to provide comprehensive comments for the authors. Additionally, reviewers are encouraged to provide comments that are for editors only, including a recommendation about whether the article should be published, concerns about misconduct, or problems adequately assessing all parts of the manuscript. Reviewers are requested to disclose any potential conflict of interest. The comments provided by the reviewers inform the decision of NOMAD's editorial team to publish or refuse the submission.
NOMAD also publishes thematic issues which may include invited external guest editors. The peer review process for thematic issues follows the same guidelines as regular issues.

Non-research articles, such as editorials, introductions and book reviews, do not undergo peer review.

Plagiarism and text-recycling

All use of material and data, either direct or indirect, should be properly declared. Material previously published by the author should be rewritten or summarised to avoid text-recycling or self-plagiarism and accompanied by an appropriate in-text citation and reference.

NOMAD publishes original research only; duplicate submissions or publications are not accepted. If a preprint has been uploaded prior to submission at NOMAD, please see our policy on preprints and prior postings below, and contact the editorial team if there is any uncertainty.

Preprints and prior postings
Prior posting or distribution of any part of the manuscript must be disclosed upon submission. Uploading of an Author's Original Manuscript (AOM) to preprint servers while the manuscript is under consideration by NOMAD (i.e., after submission) is not allowed. If there is any uncertainty, please contact our editorial team prior to submission.

Preservation of published material
The content of NOMAD is archived digitally in two seperate locations, at NCM and at the Danish royal library's portal tidsskrift.dk.

Publication fees
All of NOMAD's publications are published free of charge, without publication fees or article processing charges (APC).
All works are published Open Access and are available to read free of charge and without requirement for registration.

Research ethics, transparency, and consent
It is the author's responsibility to determine the ethical obligations of informing and obtaining consent of their research subjects. If consent is deemed necessary, it should be obtained for all material including text or images pertaining to the research subjects. When anonymity is required, authors should be prepared to share raw data and collected empirical material with the editorial board, if questions arise.

Third-party material
As part of the publication agreement authors sign, it is the author's responsibility to obtain permission from the copyright owner for use of any third-party material. Any such material should be clearly identified and credited within the content of the submission. Alternatively, the author should acknowledge that the use of third-party material is allowed because the material is in the public domain or the author has performed a fair-use analysis and reasonably believes use to be permitted. Such material should still receive full credit.
